

Green Antz Ecohubs

An initiative by Green Antz Builders

Ecohubs are waste management and treatment facilities for plastic waste that creates one of their products, Ecobricks.

By producing Ecobricks through Ecohubs, Green Antz can reduce plastic waste and lessen carbon dioxide emissions from manufacturing bricks.

They do this by collecting plastic waste from the various drop-off points scattered in Luzon, Philippines.

Sustainability programs can adopt Ecohubs as it is designed to be socially inclusive.

They also work hand-in-hand with large corporations such as malls, barangays, and communities to recycle and manage their waste.
